New technologies developed specifically for video game systems are being coupled with other new technologies, such as DVDs. So how are the big three games against each other? Let's look at each system based on certain criteria. We'll start with the processor. PlayStation 3 uses cell processors. Developed by Toshiba and IBM specifically for the gaming system, the concept behind this processor is to create chips that act like biological cells in the organism. It's computing on a single chip. Cell processors can collaborate with each other, making it possible to create virtual supercomputers by connecting various cell processors together. The Xbox 360 processor is a Power-PC-based CPU adapted from IBM. It has three synchronous cores running at 3.2 gigahertz (GHz) each. This processor has plenty of horsepower, but it doesn't have the PlayStation 3 design cell architecture. The Nintendo Wii processor wasn't very impressive. It is an IBM Broadway 729 megahertz (MHz) processor. While the chip is not in the same league as its competitors, Nintendo executives say the processor is more than strong enough to provide a fun gaming experience. Next let's take a look at the graphics. PlayStation 3 uses the RSX (GPU) graphics processing unit which runs at 550 MHz. Xbox 360 has 500 MHz ATI GPU. MHZ's 243 Hollywood ATI card dominates the graphics for the Nintendo Wii. PlayStation has an advantage on specifications, although some players say that they feel that Xbox uses its capabilities better than PlayStation. Meanwhile, Nintendo claims the company wants to be more focused in making fun and less games on graphic beef. Audio is the same story. PlayStation 3 and Xbox 360 can give the sound around Dolby. The Nintendo Wii can produce stereo sound and consults the sound around. These three systems can connect to the Internet. Microsoft's Xbox Live service is arguably the most popular presence in console Internet games, but Sony is trying to change that. Nintendo made loyal fans very happy when it announced the players would be able to buy and download many classic games to the Wii system. All three companies are also exploring social networking apps through this video game system. PlayStation 3 is also a Blu-ray DVD player, which may provide an advantage over the other two consoles. For those who want Blu-ray players and gaming systems, PlayStation 3 is a tempting option. Before the end of the high-definition disk war, Microsoft released an external HD-DVD drive that users could connect to the Xbox 360 console, but discontinued production in February 2008 after the HD-DVD format handed the ghost [source: GameScore Blog]. For hardcore players, options usually boil down either PlayStation 3 or Xbox 360. While specifications seem to favor Sony consoles, other considerations such as gaming libraries and playing online can entice players to Microsoft. Some players like to see backward compatibility -- can a new system play a game designed for older systems? PS3 can play some games designed for the original PlayStation but not the PS2 title. Xbox 360 can't Most Xbox games but there may be compatibility issues with some games. It appeals to casual players -- people who are not necessarily interested in devoting time to sharing their skills and becoming a master of the game. Hardcore players can Wii games, too. Despite the 360 and PS3 satisfactory blood players, the Wii seems to have a broader appeal. Which video game console will reign supreme? Microsoft, Sony and Nintendo all claim that their respective consoles will sell the most units. But no matter which company comes out on top, it's safe to say that all players are winners. On the next page, we'll see some interesting facts about video game consoles. hi all... I wanted to say before I started that I knew that this was going to take a very long time and TON of work to be done. I've tried it... But... im wonder if someone can tell me exactly how to make a REAL 3D video game. I know that pain requires a model ... and textures... and audio... and all that crap. But, for me, .exe is a huge part because that's basically the hardest part (ish). I've done a bit of modelling and I can do some texture though, not so great. I realize that you'll say Get a program to make it like a game maker but ... I've tried it and it's absolutely unpleasant to me. I mean... i want the game to be %100 mine. I want code from scratch. I know that this is very hard, but I'm ready to put time into it. I have almost every night of the week, and a weekend to work on it for a 5-12-hour lik, so I have time. I just need to know how to make an exe and use another game file with it. I know im asking a lot... but I really want 2 to do it. It would propel me crazy if I didn't. And, if I can... I want to make it a ps2 game. Please do not reply if you can't/rent will help me because ... Good... I just wanted to make my game. So PLEASE HELP!!!!!!! Thank you in advance. Please feel free to ask any questions about what I want to do, thank you! Ever wondered how video games were developed? We see the creation of your favorite games and technologies. Read how 3DO created their game, what the game's ratings mean or how the game's characters move so fluid. Ad Hey my name is Dewie im wanting to make some new video games and I want to hear all your thoughts for the new video games I'm looking forward to for some collaboration. Anyone posting will get all the credit for everything they do and post away. Donkey Kong Game Chair Kirby Game Mac Mario Games Minecraft Game Nintendo 3DS Game Nintendo Console Suis Case Nintendo Switch Charging Controller Nintendo Switch Playstands PC Joysticks PlayStation Acknowledgement. Have played Solitaire, Minesweeper or other games on your computer at work before. And you may feel a little guilty about it. But imagine a workplace where this kind of behavior is not encircled, but is actually encouraged. Following the trend of hot red games-industry U.S. video games reached \$12.5 billion in 2006-companies across the country are the designation office areas merely the purpose of the game. They found that not only did their game room help improve employee morale and cohesion, but they also helped attract younger workforces and increase productivity. In fact, according to a recent survey by WorldWinner, a subsidiary of FUN Technologies Inc., more than 80 percent of online players playing on and off throughout the working day said they could focus better on work after play. The reported 72 per cent actually rely on game breaks to help them deal with job-related pressures. Fortunately for them, games at work are becoming more acceptable, and in some companies, it's the norm. If anything, we tell employees to play more, says John Vechey, co-founder and director of PopCap Games. Seattle-based casual computers and video game developers devote entire rooms to the game. This room can be allowed, as employees need to play PopCap games such as Bejeweled and Zuma to make improvements and recommendations. Our employees might work less, but they work smarter because they figure out how to make the game more enjoyable, says Vechey. PopCap employees can even play from the comfort of their own desks by joining colleagues on multiplayer games, such as Hello, on the corporate network. Vechey admits networking games can be noisy at times. I think it's a distraction when people scream across the office, and it's hard for people who don't play the game, he said. But, overall, Vechey says he doesn't have any major issues. And, as he said, the company's clients are proof that games at work are becoming more acceptable in many different workplace cultures, including conventions in which the 80-year-old nun plays Bookworm and Bejeweled to relax and horrize their mental skills. One of the most popular reasons for having a games room, other than business purposes, is to build office morale. Scott Shamborg and Rod Rakic of Critical Mass, an interactive services firm, said their game room was not only a great recruiting tool, but also the perfect place to interact with colleagues. This room is named Nest, refers to the activity hub, and includes a large LCD TV, satellite TV, Dell XPS 600, iMac, Sony PSP, Xbox 360, Nintendo Wii, TiVo and more. When interviewing potential employees, Rakic and Shamborg showed the prospect of a game room to give them a taste for the company and its culture. They said the room had helped attract younger workers, although they also pointed out that older workers who were not previous players were also drawn to team-like construction events NHL 2007 Tourney. Aside from the social aspect of the game room, they are also a place to relax at the end of a long day. For intellectual property lawyers at banner & Witcoff's Washington D.C. firm, the game is a perfect escape from a long and growing work schedule. We work hard as lawyers, and we love to play hard, says Ross Dannenberg, a decisive shareholder and lawyer who reports on intellectual intellects protection in the video game industry in his blog. The firm's play area is housed in the conference room, so lawyers need to make sure the room is free of clients and meetings before game time begins. A few nights, lawyers continue to play even after they return home. At times, five to 10 lawyers from the Washington and Chicago offices will check in at home to play and chat. But not all companies with game rooms deal specifically with games in their daily work. Take Edmunds.com, an automotive information website, for example. According to COO Avi Steinlauf, the purpose of their game room is to make workers feel more at home. We want our employees to enjoy being here. The game room is part of who we are and what we are all about, Steinlauf said. If employees want to relax, they are encouraged to visit the room, which includes Pop-a-Shot basketball, arcade-style video games and a suitable two-person car racing game in the industry. If people get too big, workers can expand the room by raising the garage doors that make up one of the walls of the room. He organized, nor did Steinlauf nor any other company interviewed said they had to implement any rules or rules regarding their game room. According to Vechey, the only workers who may have trouble in this type of environment are the ones who can't regulate themselves. But, overall, companies agree positively outweigh anything negative by increasing office morale, creating a positive work culture and, as a result, increasing employee productivity. Productivity.
